

# DWA\_08 Discussion Questions

In this module you will continue with your “Book Connect” codebase, and further iterate on your abstractions. You will be required to create an encapsulated abstraction of the book preview by means of a single factory function. If you are up for it you can also encapsulate other aspects of the app into their own abstractions.

To prepare for your session with your coach, please answer the following questions. Then download this document as a PDF and include it in the repository with your code.

---

1. What parts of encapsulating your logic were easy?

I've already developed the majority of the logic, leaving only the task of integrating it within a factory function.

---

2. What parts of encapsulating your logic were hard?

Struggling to grasp the concept behind returning an object instead of simply showing the preview.

---

3. Is abstracting the book preview a good or bad idea? Why?

Indeed, I believe consolidating all the necessary logic for tasks such as generating a book preview into a single function results in cleaner, more intuitive code that is generally easier to comprehend.
